PROFILE

Guidewire Digital Solutions Architect and Lead Developer with 10+ years in engineering and design, and 7+ years delivering Guidewire Digital portals for global insurers.

I own delivery end-to-end — presenting the KDD/TDD architecture, building the frontend, extending the GW Edge / Cloud API middleware, and leading the teams that ship the Portals web applications. I deliver every kind of Digital Portal application, as well as fully custom implementations built from scratch. My portfolio spans Jutro apps, Quote & Buy, Account Management, ProducerEngage, VendorEngage and FNOL — both on-premise and on GW Cloud. I have also architected and led teams delivering custom web applications without Guidewire components, connecting directly to the xCenters.

I have a strong eye for design and an AI-powered delivery process that typically halves time-to-market.
